

## Hand-held Showers

Hand-held showers are a popular option for MTI baths. They can be used to rinse while bathing and also allow for easy cleaning of the bathing well. All MTI hand-held showers are factory-installed.

The use of a hand-held shower requires a diverter so that water flow can be directed from a filling fixture to a personal hand-held sprayer. When choosing a hand-held shower in conjunction with the Fill-Flush® system, the Breda diverter included with all MTI hand-held showers will also act as an atmospheric backflow prevention device.

MTI offers several in-stock hand-held options, or a different selection can be sent to MTI for factory installation with the whirlpool system.

Please mark desired location on specification sheet when ordering.

*Breda Valve diverter included with hand-held shower*

### **MTI Traditional with Breda Diverter**

Chrome (HHTC) **\$1,050**
